

Cookie Policy DroneStock – 2026 (V4)

1. General

DroneStock is a trading name of BumbleB.nu B.V., established in Krommenie and registered with the Dutch Chamber of Commerce under number 94135363.

This Cookie Policy explains which cookies, browser storage and similar technologies are used on the DroneStock platform.

2. Necessary and functional technologies

DroneStock uses necessary and functional technologies to ensure that the Platform works correctly. These may be used for purposes including:

- authentication and maintaining active user sessions;
- remembering the shopping cart;
- remembering favourites;
- remembering language preferences;
- remembering the selected business or private price display;
- restoring search results, map views and other navigation preferences;
- security and fraud prevention;
- the correct functioning of account and payment features.

Cookies and browser storage, including localStorage and sessionStorage, may be used for these purposes. localStorage can retain data between visits. sessionStorage generally retains data for the relevant browser session.

These technologies are used without prior consent only to the extent that the statutory exemption for necessary technologies applies. Remembering a requested feature is distinguished from additionally analysing the use of that feature. Such analysis is described separately in Article 5.

3. Payments

DroneStock uses Stripe for payments and Creator subscriptions. When a User proceeds to the payment environment, Stripe may use cookies or similar technologies for payment processing, security and fraud prevention. Where other technologies requiring consent are used, the applicable consent rules apply.

The relevant payment service provider's privacy and cookie policies also apply to the use of such technologies within the external payment environment.

4. External services

DroneStock may use external services for certain features, such as map and location features. When these services load, technical data such as the IP address, browser data and information about the requested resource may be transmitted to the relevant provider.

When map features are used, map tiles may be loaded from OpenStreetMap services. The browser connects to the external provider for this purpose. The provider may therefore receive

technical data, including the IP address and information about the requested map tiles. An external network connection is not automatically the same as placing a cookie. The associated personal data processing is also described in the Privacy Policy.

DroneStock limits the use of external services as far as possible to what is necessary for the relevant feature.

5. Analytics, marketing and tracking

DroneStock uses its own technologies for visitor statistics, search statistics, product interactions and referral-source analysis. These optional analyses are enabled only after you choose 'Allow statistics' in the cookie settings. With 'Essential only', these analyses remain disabled. You can also use the Platform if you refuse analytics.

After consent, a random browser identifier may be stored. DroneStock uses this identifier and derived hashes to distinguish or connect visits, product impressions, product views, favourite and shopping-cart actions, searches and collection visits. A hashed form of the IP address may also be processed for visitor statistics. Hashing does not automatically mean that data is anonymous.

Referral-source analysis may record information including a referring website's domain, the page visited, timestamps, language and campaign parameters. On a purchase or creator application, the referral source may temporarily be linked to that purchase or application. This data helps DroneStock understand the use, discoverability and performance of the Platform and the Content offered.

DroneStock does not use Google Analytics, Google Tag Manager or Meta Pixel for these own analyses. The information collected is not used to track you on other websites through these technologies.

You can withdraw consent at any time through 'Cookie settings' in the footer. From that point, optional measurement stops in that browser and the browser storage used for it is deleted. The Privacy Policy describes the processing of personal data already collected and the associated rights.

6. Retention periods

The cookie through which DroneStock remembers your analytics choice is valid for 180 days. Browser storage is also used to pass a changed choice to other open tabs. Once the validity period expires, we ask for your choice again; analytics remains disabled without valid consent.

A separate random key is used to process your analytics choice and any withdrawal. It remains available in the browser for a maximum of 180 days during the relevant consent period and links the associated statistics to an erasure request. The key is not used for advertising or to track you on other websites. This is separate from analytics identifiers with a maximum validity period of 30 days.

Where an erasure request has not yet been handled by the server, the necessary request is retained in browser storage and a separate

Cookie Policy DroneStock – 2026 (V4)

cookie so that the website can resubmit it. This cookie has a maximum validity period of 400 days and is removed earlier once the server confirms that processing is complete. The associated browser storage is also erased after that confirmation. Browser storage does not automatically expire after 400 days and may remain until that confirmation or removal by you or your browser. This data is used solely to process withdrawal; analytics remains disabled while the request is outstanding.

The analytics identifier and referral-source data stored in the browser are valid for a maximum of 30 days. The identifier's period is not extended on every visit. After expiry, the relevant data is no longer used for measurement. Because localStorage does not expire automatically, expired data is removed or replaced when the website becomes active again. Withdrawing consent immediately removes the analytics storage present in that browser.

Functional localStorage, such as your shopping cart, favourites and language preferences, does not always have an automatic expiry period. This data may remain until the website, you or your browser removes it. sessionStorage generally remains available during the relevant browser session. Any analytics referral-source data attached to a shopping-cart item is subject to the 30-day period; the cart item itself may be retained for longer.

Browser storage duration is separate from server-side retention periods. Applicable server retention periods are described in the Privacy Policy. Technologies within external services may be subject to the relevant provider's storage and retention periods.

7. Managing cookies and browser storage

Through 'Cookie settings' in the footer, you can allow analytics or withdraw consent. You do not need to log in. Your choice is remembered separately for each website domain, browser and device; make a separate choice on other domains, browsers and devices.

Users can view, delete or block cookies and browser storage through their browser settings.

Deleting cookies or browser storage does not automatically delete data previously stored on the servers of DroneStock or an external service provider. Requests concerning that personal data can be made using the options described in the Privacy Policy.

Blocking or deleting necessary or functional technologies may cause parts of the Platform, such as login, the shopping cart, favourites or language preferences, to stop working or work incorrectly.

8. Changes

DroneStock may amend this Cookie Policy when the technologies used, the services or applicable laws and regulations change. The most recent version is published on the website.

Where a change affects the purposes for which data is collected or the consent required, Users are informed before the relevant new

processing begins. New consent is requested where required.

Reading this Cookie Policy or accepting the General Terms and Conditions does not automatically constitute consent to technologies requiring separate consent.

9. Contact

Questions about cookies, browser storage or privacy can be addressed to:

BumbleB.nu B.V. / DroneStock
